

Six Domains of Reasoning

No syllabus to memorize — GRC tests how you think, not what you've been taught.

01. Deductive reasoning

What must be true? Starting from facts or rules and working out what necessarily follows.

02. Probabilistic reasoning

What is likely to be true? Weighing evidence and base rates.

03. Causal reasoning

What causes what? Telling real causes from coincidence.

04. Strategic reasoning

What should I do when others are thinking too? Game-theoretic thinking.

05. Critical reading

Is this argument sound? Finding hidden assumptions and gaps.

06. Modelling & estimation

How do I structure this messy problem? Breaking a vague problem into parts.
